Assignment: User stories and wireframes

Jaume Andreu Sabater Malondra • 21 d'oct. (Darrera modificació: 23 d'oct.)

100 punts | Data de venciment: 5 de nov.

Overview

This assignment centres on translating functional user requirements into multi-platform visual user stories (wireframes and storyboards). Your goal is to design clear, intuitive visual workflows that place heavy emphasis on navigation mechanics, error handling, visual hierarchy, and narrative progression.

1. User story scope

You must deliver a total of following the criteria and best practices established in class.

Baseline user stories (4 mandatory)

- *As a club owner, I want to log in for the first time using a one-time link sent to my email inbox.*
- *As a club owner, I want to create a user with a specific role (athlete, coach, staff, admin).* This represents a full Create, Read, Update, Delete (CRUD) workflow and must include a user listing screen. Note: You may split or structure this across screens as needed within the story.
- *As a new user, I want to log in for the first time.*
- *As an existing user, I want to recover my lost password.*

Custom user stories (3 required)

Define of your choice to complete the application functionality.

Examples of custom stories:

- *As a coach, I want to view my calendar of events (training sessions and matches) for my assigned teams, with detailed information of each event.*
- *As a coach, I want to view the profile page of one of the athletes I coach and add notes to it.*

Project context and alternative domains

By default, all stories should be set within the athletics sports club system studied in class. However, if you prefer to use your own personal project or a project from another subject, you are free to do so under one strict condition: before proceeding.

2. Dual-platform requirements

Every single user story must be designed for :

- Desktop browser view.
- Choose of the following options to use consistently across your stories:

- Mobile (smartphone)
- Tablet
- Smart TV

Each story deliverable must clearly display both platform layouts side-by-side or sequentially within the same file to demonstrate how the layout adapts across screen sizes and interaction paradigms.

3. UX, navigation and design requirements

Your wireframes and storyboards must incorporate the following UX feedback and interaction mechanics:

- The format of each user story must tell a cohesive visual story from start to finish.
- For the initial club owner login, account for mandatory setup steps (e.g. filling in essential club details or profile information) before granting access to the main dashboard.
- Map all screen-to-screen transitions using explicit direction arrows. Each arrow (e.g. the specific button, link, or tab clicked/tapped) and point directly to the resulting screen or updated UI state.
- Every user story must explicitly model error conditions (e.g. invalid inputs, missing fields, failed logins). Highlight these errors using pointing directly at the affected screen components or error messages.
- Prioritise key controls and primary actions by carefully considering their position, grouping, and relative sizing compared to secondary or destructive actions.
- Add clear explanatory labels and commentary for any logic, business rules, or triggers that cannot be easily deduced from the visual layout alone.

4. Delivery and submission constraints

File format and quantity

- You must submit (7 files in total for the assignment).
- JPEG, WebP, PNG, or PDF.

File naming convention

To ensure clear organization, name your files according to the following structure:

Story[Number]_[Role]_[BriefDescription].[ext]

Examples:

- *Story01_ClubOwner_FirstLogin.png*
- *Story02_ClubOwner_UserCRUD.pdf*
- *Story03_NewUser_FirstLogin.jpg*
- *Story04_ExistingUser_PasswordRecovery.webp*
- *Story05_Coach_ViewCalendar.png*
- *Story06_Coach_EventDetails.png*
- *Story07_Athlete_ViewStats.png*

5. Final check before submission

Before submitting your files on Google Classroom, please . Check your work against every criterion to ensure your deliverable meets the expected standards.

Rúbrica /100

Story scope and dual-platform coverage	/18
Narrative storyboarding and onboarding logic	/18
Navigation mechanics and flow	/14
Error handling and feedback logic	/14
Visual hierarchy and cntrol placement	/14
UI annotations and explanatory labels	/14
Overall execution and instructor discretion	/8
